

Community solar

You can **start saving money** and **supporting solar** through community solar.

What is **community solar**?

Rooftop or on-site solar systems are not an option available to everyone, such as renters and many multi-family or corporate buildings. Community solar projects expand access to clean energy and give residents, businesses and organizations the opportunity to experience the benefits of solar power without installing solar panels on-site.

How does community solar work?

Step 1

AES builds a community solar project in your electric service territory.

Step 2

You and others subscribe, at no up-front cost, to purchase a portion of the solar energy produced by the project at a discount, based on your energy needs.

Step 3

You receive a credit on your electric bill and get the benefits of going solar with no panels on your property, while saving you money!

Who can subscribe to a community solar project?

- Renters and homeowners
- Multi-family buildings
- Businesses
- Schools
- Municipalities
- And more!

Community solar subscriber benefits

Support local, clean energy

Save money on your annual electricity costs

Plus no up-front investment.

Easy opt in and opt out

No change or interruption in your electric service and keep your subscription if you move within the same service territory.

Our approach to community solar partnerships

We understand that our success is only as strong as our partnerships with the communities where we operate. We are committed to responsible clean energy development that creates long-term value and positive impact for both local communities and the environment.

AES is a national leader in community solar and clean energy solutions.

400+ MW

Community solar projects owned and operated in the US.

4.9+ GW

Wind, solar, and energy storage projects owned and operated in the US.

About AES

Founded in 1981 and headquartered in Arlington, Virginia, The AES Corporation (AES) is a Fortune 500 global energy company accelerating the future of energy. Together with our many stakeholders, we're improving lives by delivering the greener, smarter energy solutions the world needs.
